

# Conveyor Technical Solutions

Conveyor Technical Solutions, Newtown manor, New Orchard Road, Kilkenny, R95 YE36

Conveyor Technical Solutions was formed in November 2009 by Adrian Murphy and John Costelloe. They design and manufacture conveyor systems for the food, pharmaceutical and drinks industries. Initially they designed and manufactured from home while utilising a temporary fitter when needed. This enabled them to keep associated costs low and retain a positive cash flow balance while establishing a core client structure.

In 2015 the business grew to employ 10 people that include a team of dedicated design engineers, expert technicians and fitters culminating in some 35 years of design experience; and their range of services include everything from mechanical design, training services to consultancy and installation.

Furthermore their product offerings include bespoke conveyor systems, palletising and material handling solutions in industries such as food, drink, pharmaceutical and cosmetics.

The business has built up a strong knowledge base of cheese and chocolate handling which has led to continuous contracts with some of the big players in the food production business such as The Kerry Group, Kraft Foods, Diageo to name but a few.

**In order to facilitate expansion in 2012 Local Enterprise Office Kilkenny provided a business expansion grant to finance capital costs, salary costs, marketing costs and business specific training.**
