

# JS Remediation Ltd

The Quay, Thomastown, Co. Kilkenny, Ireland. R95 Y3F1

With over 20 years experience in geotechnical and environmental land remediation in Ireland, the United Kingdom (UK) and further afield, in 2015, Jim Stephenson established JS Remediation Ltd. after recognising that there was a market gap at an industrial level in the area of land remediation and most contracts in Ireland were awarded to UK specialist firms.

With unparalleled in-house experience, JS Remediation provides numerous methods of soil and groundwater treatment such as bioremediation and chemical oxidation as well as precipitation, excavation and disposal. Since the establishment of the firm, JS Remediation has built up a reputation within the industry of offering an innovative, reliable and safety conscious service. With land values increasing in recent years coupled with a heightened level of enforcement from the Environmental Protection Agency JS Remediation is quickly creating a market niche and developing an impressive customer base of companies in the

pharmaceutical, mining, petrochemical industries as well as many local authorities in Ireland

**Local Enterprise Office Kilkenny provided JS Remediation with a Priming Grant which assisted in the purchase of specialised equipment, training and increasing the company's workforce.**

JS Remediation pride themselves on working with their clients from project commencement until completion, working with them to achieve the most effective sustainable and optimal solution based on time, quality and cost. The business is also completely mobile and supplies a range of modular and fully customisable systems to suit projects from minute to the very large.
